If you have any questions or concerns, feel free to contact us by mail or in the comments, and we will be happy to help you to make sure you don't miss the latest updates and new products. Thank you for your purchase!

Unpacking the template

- Download the template archive called innomix.zip.
- Unzip the files to the desired folder on your computer or hosting.

Uploading files to the server

- Use an FTP client (such as FileZilla) to connect to the server.
- Upload all files from the unpacked folder to the root directory of your hosting.

Basic template structure

- CSS: style files;
- fonts: font files;
- img: Images:
- JS: Scripts;
- phpmailer: a library for sending emails;
- mail.php: a ready-made file for the functionality of sending emails to email. You just need to enter your data in it;
- favicon.ico: the icon that is displayed in the tab of your browser;

Template libraries

- Phpmailer: a library to receive emails to your email;
- R-modalwindow: A library for modal windows;
- Graph-tabs: a library for tabs;
- Video.js: library for video player;
- R-accordion library;
- Fslightbox: library for the gallery;
- Swiper: Slider Library ;
- JustValidate: a library for validating forms;
- Intltelinput: a library for international telephones;
- Rellax: Parallax Library;

Main components of the template

Main Sections

Section "Experts"

- **Components:**
  - An **h2** heading with classes to style.
  - Using the Swiper slider to display Expert Advisor cards:
    - Each card (**swiper-slide**) includes:
      - **The picture** element for responsive image loading.
      - Expert's name and description.

Section "Partners"

- **Components:**
  - **Heading h2**.
  - A list of partners in the form of a rudimentary **ul** list, where each logo is loaded via **a picture** element, which ensures cross-browser compatibility.

Section "Become Partner"

- **Components:**
  - The background is set via CSS.

    - Title and brief information message about the partnership.
    - A button to go to the partnership application form.

Section «Events and News»

- **Purpose:** Informing about events and news.
- **Components:**
    - **Heading h2**.
    - A list of events in the form of **ul**, where each record includes:
        - **A picture** element with an image of the event.
        - Event title (**h3**), description (**p**), and **time**).

Section "Request"

- **Purpose:** Providing a form for contacting users.
- **Components:**
    - Title and description of the possibility of leaving a request.
    - Contact information with links to social networks.
    - A form with input fields (name, email, phone number) and a send button.

Footer

- **Purpose:** Providing navigation and contact information.
- **Components:**
    - Logo and text about the rights to the content.
    - A navigation menu with buttons that use these attributes to scroll to sections.
    - Contact details, including address and email.

Login modal

- **Purpose:** Providing a login form.
- **Components:**
    - Title for the form.
    - Fields for entering email and password.
    - A button to submit the form and a link to register.

General aspects

Responsive layout: Using <picture> elements and responsive images allows you to optimize loading on various devices.

Animation: Classes for animation (anim-item, no-anim-repeat) provide a dynamic display of elements, improving the user experience.

Semantic HTML: The structure of the document uses semantic tags, which increases accessibility and SEO optimization.

Customization

Parallax:

You can disable the parallax effect by removing the **rellax** class from the markup.You can change the parallax rate through the special **data-rellax-speed** attributes (for mobile devices**, data-rellax-tablet-speed**).

Animations:

The **anim-item** class is responsible for animating the components of this template. To prevent the animation from repeating, you need to add **the no-anim-repeat** class.

Tabs:

For the tabs to work, you need to copy the basic markup and connect the d**attribute ata-tabs="markets-tabs"**

Anchor Links:

You can configure in detail which component of the template will be smoothly scrolled. To do this, you need to attach the **data-scroll="" -"** attribute to the link or button you will click, and the **data-anchor="-**" attributeto the component to which the scroll will occur**.** It is important that the value in the two attributes matches.

Modal windows:

To interact with modal windows, connect the **data-modal="-".** attribute to the button.Connect the **data-modal-target=" ". -**" attribute to the modal window you want to open.It is important that the modal window is inside **the modal** markup.

Message form:

In order to receive messages from the form to your email, you need to fill out the **mail** file**.php**, which is at the root of the template.

FAQ

Q: How do I change the main logo?

A: Replace the **img/svg/logo** file**.svg** to your image while keeping the same name.

Q: The template does not display correctly in the browser. What to do?

A: Make sure that all files are properly uploaded to the server and that you are using an up-to-date browser.

Q: I filled out the mail file**.php, but the messages are not coming. What should I do?**

A: Make sure that your server supports php. Also make sure that the data is correct.

Conclusion

Tips for work:

We recommend that you back up your changes and test them on a local server before uploading them to your production site.

Gratitude:

Thank you for choosing innomix! Don't forget to reach out for support if you have any questions. ☺✨
